System And Method For Communicating in a Mobile Domain

Across Non-Persistent Data Links

Abstract of the Disclosure

5   A system and method for communicating in a mobile domain across non-persistent data links is disclosed. The method includes creating a domain data store of data relating to an enterprise system and establishing a communication link with a mobile computing device. The mobile computing device includes a mobile data store having at least a portion of the data from the enterprise system. The method further includes receiving transactions from the mobile computing

10   device. The transactions comprise at least partially data operations performed on the mobile data store prior to the establishment of the communication link. The method also includes modifying the domain data store to reflect the transactions and communicating a portion of the domain data store to the enterprise system.
